

**Algorithm 6.14:** Label Correcting Algorithm

(Input)  $G = (V, E)$  digraph with costs  $c(e) \geq 0$  ( $\forall e \in E$ ),

$E = \{e_1, \dots, e_m\}$  list of edges (arbitrarily sorted).

(1) (Initialization)

Set  $\pi_s^1 := 0$ ,  
 $\pi_i^1 := \begin{cases} c_{si} & \text{if } (s, i) \in E \\ \infty & \text{otherwise,} \end{cases} \quad \forall s \neq i \in \{1, \dots, n\}$ ,  
 $\text{pred}(i) := s \quad (\forall i = 1, \dots, n)$ ,  
 $p := 1$ .

(2) Set  $\pi_j^{p+1} := \pi_j^p \quad \forall j = 1, \dots, n$ .

For  $l = 1$  to  $m$  do

If  $e_l = (i, j)$  and  $\pi_j^{p+1} > \pi_i^p + c_{ij}$ ,

set  $\pi_j^{p+1} := \pi_i^p + c_{ij}$  and  $\text{pred}(j) := i$ .

(3) If  $\underline{\pi}^p = \underline{\pi}^{p+1}$  (STOP),  $d_i = \pi_i^p$ ; the dipaths  $P_{si}$  can be determined using the labels  $\text{pred}(i)$  backwards.

If  $\underline{\pi}^p \neq \underline{\pi}^{p+1}$  and  $p < n - 1$ , set  $p := p + 1$  and goto Step (2).

If  $\underline{\pi}^p \neq \underline{\pi}^{p+1}$  and  $p = n - 1$  (STOP), choose  $i$  with  $\pi_i^p \neq \pi_i^{p+1}$ . Using the labels  $\text{pred}(i)$ , a negative dicycle  $C$  can be obtained.
